- Acts as a shield against negative external influences
- Strengthen the skin's resistance to environmental pollutants
- Provides the skin with long-lasting hydration
- Leaves the skin feeling soft and smooth immediately
- Rich consistency
- No parabens

Anti-Pollution Cream

A PROTECTIVE CARE CREAM

Anti-Pollution Cream is a protective care cream for day and night use. The intensive formula contains effective anti-oxidative active substances that strengthen the skin's resistance to environmental pollutants.

Negative environmental influences such as contaminated air, ozone and, in particular, UV radiation stress the skin out and increase the formation of free radicals. This leads to premature ageing, a loss of elasticity and a decrease in radiance. Anti-Pollution Cream has been developed by JANSSEN COSMETICS to strengthen the skin's resistance to environmental pollutants and restore its natural barrier function. It fulfils this challenging demand with the help of a multi-active extract taken from the flowers of the red camellia, a long-lasting evergreen shrub originating in Japan that has adapted to the difficult climatic and living conditions of its environment extremely impressively. Before the winter's over and when the rest of nature is still in hibernation, this remarkable plant is already beginning to display its magnificent red blooms. Its valuable extract has proven it is anti-oxidative and able to alleviate irritation. In addition, it hydrates and improves skin density, and there are also studies verifying its effectiveness against environmental pollutants.

If used regularly, Anti-Pollution Cream will leave your skin noticeably smoother, more elastic and more resilient.

Home care application

Apply and gently massage Anti-Pollution Cream into the cleansed skin of your face and the area above your neckline regularly in the morning and/or night.

Tip: Ideally, Anti-Pollution Cream should be used in combination with our Pro-Immune Serum. While our Pro-Immune Serum is designed to stabilise the skin's immune cells, our Anti-Pollution Cream protects it from negative external influences. If your skin is particularly sensitive or exposed to increased levels of UV radiation, Anti-Pollution Cream can be used in combination with Face Guard Advanced. In this case, we recommend the following application sequence:

1. Pro-Immune Serum
2. Face Guard Advanced
3. Anti-Pollution Cream

ACTIVE SUBSTANCES

- **Red camellia extract:** An extract taken from the red flowers of the Camellia japonica, which is native to Japan and Korea. It is an antioxidant, strengthens the skin's resistance to environmental pollutants, and improves skin density, hydration and roughness
- **Saccharide Isomerate:** A carbohydrate complex with properties identical to those of human skin that leaves the skin moisturised for long periods of time
- **Long- and short-chain hyaluronic acid:** Provides the skin with intensive hydration and protection
- **Allantoin:** Soothing
- **Shea butter:** Nourishes the skin and leaves it soft and smooth
