Cellulite Contour Formula

ACTIVATING CELLULITE CARE CONCENTRATE

A combination of various treatment approaches is necessary to effectively combat and prevent cellulite. In the classic sense, these include a healthy diet, regular exercise and measures which promote the circulation, such as massages and alternating showers.

JANSSEN COSMETICS goes one step further and makes use of modern knowledge regarding the lipid metabolism's complex activity. This is how the highly concentrated Cellulite Contour Formula care concentrate has come into being in collaboration with the Dr. Sacher Kosmetik development laboratory. This gel-like lotion contains the stimulating, plant-based cellulite active substance complex consisting of microalgae, yellow horned poppy and caffeine.

This pure plant power has been scientifically proved* and specifically combats cellulite:
- Activation of lipolysis (lipid release)
- Inhibition of new lipid cell formation
- Reduction of adipose tissue

Elastin-stimulating peptides additionally fortify the skin's elastic network and ensure increased firmness.

ACTIVE SUBSTANCES

- Plant-based cellulite active substance complex with scientifically proven studies; combination of three active substances:
  - Extract of the green algae Euglena gracilis: Synthesis of the cellular energy store ATP (adenosine triphosphate) in the cells' power plants (mitochondria); blockage of lipid deposition via the synthesis of fibronectin
  - Extract from the leaves of the yellow horned poppy: Anti-inflammatory; supports the transportation of fatty acids into the mitochondria
  - Caffeine: Anti-inflammatory, lipid breakdown (lipolysis), blockage of lipid deposition
- ESP: Elastin-stimulating peptides structure the elastic tissue and ensure increased firmness
- Avocado oil: Rich in natural fatty acids and vitamins A, E and D; cares for and protects the skin, leaving it feeling soft and smooth
- Menthol: Cools and revives the metabolism

Application

Apply Cellulite Contour Formula onto the problem areas and massage in after cleansing the body with Oxygenating Body Scrub. The individual areas of skin can be "plucked" between the thumb and index finger, and can be gently pulled away from the muscles wherever possible. Carry this so-called "plucking massage" out systematically from the knees and thighs to the bottom and hips.

SKIN APPLETS offers a product range for supporting body treatments in the professional salon. The care concept is simple to apply and can be used for an effective partial and full body treatment. The specific treatment measures are supplemented by body packs and massages, and offer the beautician a varied care spectrum.

Note: The metabolism-activating effect may lead to a sensation of cold/heat. This is completely normal and not to be classified as an intolerance. Please do not use immediately following depilation. Please avoid contact with the eyes and mucous membranes. Wash your hands after applying.
